**STEP 1** Use a string line to provide a guide for the position of the posts. Mark out and dig holes for the posts. For our 90mm x 90mm post we recommend a hole 200mm circumference by 600mm depth.

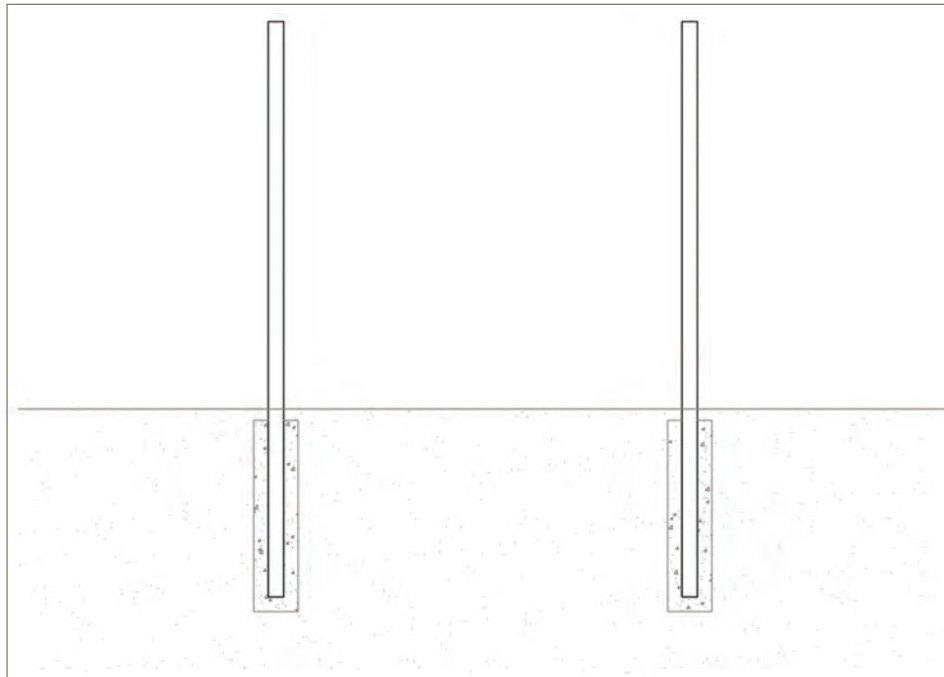

SIDE  
VIEW

**STEP 2** Insert post. Use spirit level to ensure it is level in both directions and correctly positioned against the string line. Posts need to be set at the correct width.

**STEP 3** Fill the hole with post mix (use manufacturer's instructions).  
Adjust post into position and support until post mix sets.

**STEP 4** Please check that tops of each post are at a uniform height, unless there is a change in heights required.

**STEP 5** Repeat steps 2-4 as needed. Use spirit level to check each post is at correct height for panels.
